

# TREND MICRO™ Deep Discovery Email Inspector 7100 Quick Start Guide

Deep Discovery Email Inspector stops sophisticated targeted attacks and cyber threats by scanning, simulating, and analyzing suspicious links and attachments in email messages before they can threaten your network. Designed to integrate into your existing anti-spam/antivirus network topology, Deep Discovery Email Inspector can act as a Mail Transfer Agent in the mail traffic flow or as an out-of-band appliance silently monitoring your network for cyber threats.

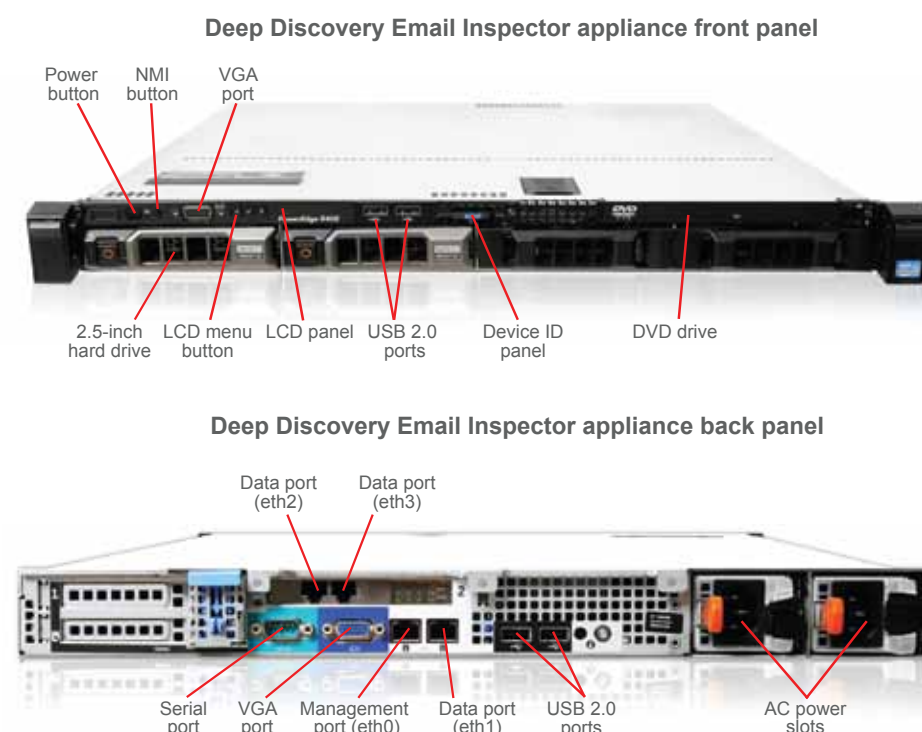

## 1 Opening and Inspecting the Carton

Verify that the Deep Discovery Email Inspector carton contains the following items:

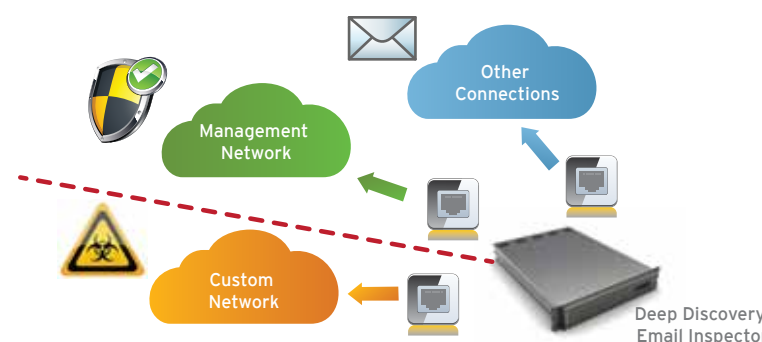

## 2 Examining the Deep Discovery Email Inspector Appliance

The power button is behind the bezel. Remove the bezel for the initial configuration and then re-attach it when finished.

## 3 Recommended Network Configuration

Custom network	The custom network handles sandbox analysis. The custom network should be an isolated network without a proxy or connection restrictions so that malicious samples do not affect other networks. Use any available data port (eth1, eth2, eth3) that is not configured for mail routing.
Management network	The management network handles the management console, SSH connections, and Trend Micro updates. Mail traffic can also pass through the management network. Use only the management port (eth0).
Other connections	Other connections handle mail traffic. Use any available data port (eth1, eth2, eth3) that is not configured for the custom network.

## 4 Deployment Checklist

Requirement	Details
Activation Code	Obtain from Trend Micro
Monitor and VGA cable	Connects to the VGA port of the appliance
USB keyboard	Connects to the USB port of the appliance
USB mouse	Connects to the USB port of the appliance
Ethernet cables (2-4 cables)	Connect to the management and data ports. <b>Required:</b> Management port connects to the management network. <b>Recommended:</b> Data ports (eth1, eth2, eth3) connect to the custom network. <b>Optional:</b> Remaining data ports connect to the Internet for mail routing.
IP Addresses (1 - 3 addresses)	<b>Required:</b> One IP address for the management network. <b>Recommended:</b> Two IP addresses for the custom network (the custom network requires one data port connection and two IP addresses for analysis). <b>Optional:</b> Two IP addresses for additional mail routing.
Internet-enabled computer	A computer that has the following software installed: - A supported web browser: - Internet Explorer™ 9, 10, 11 - Firefox™ 24 - Google™ Chrome 32 - Adobe™ Flash™ 10 or later

## 5 Setting Up the Hardware

- Mount the Deep Discovery Email Inspector appliance in a standard 19-inch 4-post rack, or on a free-standing object, such as a sturdy desktop.

**Note:** When mounting the appliance, leave at least two inches of clearance on all sides for proper ventilation and cooling.

- Connect the appliance to a power source.
- Connect the monitor to the VGA port at the front of the appliance.
- Connect the keyboard and mouse to the USB ports at the front of the appliance.
- Power on the appliance.

## 6 Performing the Initial Configuration

Configure network settings in the Command Line Interface to gain access to the management console.

**Note:** For information about connecting through SSH, see the Administrator's Guide.

- Log on to the Command Line Interface with the default credentials.
  - User name: admin
  - Password: ddei
- Type "enable" (no quotes) and then press Enter. The prompt changes from > to #.
- Type the default password, "trend#1" (no quotes), and then press Enter.
- Set the host name:  
`configure network hostname <hostname>`
- Set the IP address for the management network:  
`configure network interface ipv4 eth0 <ip>`
- Set the default route:  
`configure network route default ipv4 <gateway>`
- Set the DNS:  
`configure network dns ipv4 <dns1> <dns2 (optional)>`

The initial configuration is complete and the management console is accessible.

## 7 Accessing the Management Console

- From a supported web browser, open the management console at:  
`https://{appliance_ip_address}`

**Note:** Use the IP address configured in the initial configuration (Step 5). The default IP address is 192.168.252.1.

- Click **Continue** if a certificate error appears.
- Specify the default credentials.
  - User name: admin
  - Password: ddei
- Click **Log On**.

The management console dashboard appears. For additional configuration procedures, see the Getting Started chapter in the Administrator's Guide.
