Deep Discovery Inspector is a third-generation threat management solution that delivers advanced persistent threat (APT) and targeted attack visibility, insight, and control. Deep Discovery Inspector provides IT administrators with critical security information, alerts, and reports.

You can connect switches with a mirror port to any of the ports except the management port. Deep Discovery Inspector uses these ports as listening ports and will not interrupt traffic handled by the switches.

Trend Micro recommends using a custom network for sample analysis. Custom networks ideally are connected to the Internet but may be configured with their own network settings. The appliance provides the option to configure proxies for custom networks, as well as providing support for proxy authentication.

The networks must be independent of each other so that malicious samples in the custom network do not affect hosts in the management network.

To plan your network deployment environment, see the Deployment section in the Installation and Deployment Guide.

Deployment Checklist

<table>

</table>
| Ethernet cables   | One cable connects the management port of the appliance to the management network. A second cable connects a switch mirror port and any port of the appliance except the management port. Traffic to be monitored must be on a switch mirror port and any port of the appliance except the management port to monitor traffic. 
   | (Optional) One cable connects a custom network to any port of the appliance except the management port. |
| Internet-enabled computer | A computer that has at least one of the following web browsers installed: 
   | Google™ Chrome™, Microsoft™ Internet Explorer™ 11.0, Mozilla™ Firefox™ |
| IP addresses      | One static IP address is required for the management network. 
   | (Optional) One additional IP address for an Internet Virtual Analyzer, if connected to a custom network with Internet connectivity. |

Setting Up the Hardware

1. Mount the Deep Discovery Inspector appliance in a standard 19-inch 4-post rack, or on a free-standing object, such as a sturdy desk.
2. Connect the appliance to a power source.
3. Connect the power-on indicator/button to the power source.
4. Connect the USB connectors (2) to the USB port of the appliance.
5. Connect the power cords to the appliance.
6. Connect the serial port to the appliance.
7. Connect the Ethernet cable to the Ethernet port.
8. Connect the video connector to the appliance.
9. Connect the VGA port to the appliance.
10. Connect the management port to the appliance.

Performing Initial Configuration: Preconfiguration Console

Perform the initial preconfiguration from the Preconfiguration Console with any of the following:

- VDA port
- Serial port

For details on how to access the Preconfiguration Console, see the Preconfiguration chapter in the Installation and Deployment Guide.

- User name: admin
- Password: admin

Performing Initial Configuration: Management Console

1. Using a supported web browser, open the management console at: https://DeepDiscovery Inspector IP Address>

2. On the main menu, type Login On.
3. Click Log On.
4. Type a new password, and then retype it to confirm.
5. On Administration > System Settings > Time, set the system time.
7. For details on how to set up your threat protection, see the Get Started chapter in the Administrator’s Guide.
8. Connect one or more cables from the traffic source to any port of the appliance except the management port.
