Deep Discovery Inspector is a third-generation threat management solution that delivers advanced persistent threat (APT) and targeted attack visibility, insight, and control. Deep Discovery Inspector provides IT administrators with critical security information, alerts, and reports.

Opening and Inspecting the Carton
Verify that the Deep Discovery Inspector carton contains the following items:

- Rack rails
- Power cords
- Document and DVD
- Deep Discovery Inspector appliance

Examining the Deep Discovery Inspector Appliance

Front Panel
- Power-on button/indicator
- Front ID button/indicator
- Front video connector

Back Panel
- Management port
- iDRAC port
- RS-232 serial connector
- Data port 1 (1 Gbps)
- Data port 2 (1 Gbps)
- Data port 3 (1 Gbps)
- Data port 4 (1 Gbps)
- Data port 5 (1 Gbps)
- Data port 6 (1 Gbps)
- Data port 7 (10 Gbps)

Setting Up the Hardware
1. Mount the Deep Discovery Inspector appliance in a standard 19-inch 4-post rack, or on a free-standing object, such as a sturdy desk.
2. Connect the appliance to a power source.
3. Connect the monitor to the VGA port at the back of the appliance.
4. Connect the keyboard and mouse to the USB ports at the back of the appliance.
5. Connect the management port to your network.
6. Power on the appliance.

Performing Initial Configuration: Preconfiguration Console
Perform the initial preconfiguration from the Preconfiguration Console with any of the following:
- VGA port
- Serial port

For details on how to access the Preconfiguration Console, see the Preconfiguration chapter in the Installation and Deployment Guide.

Internet-enabled computer
A computer that has at least one of the following web browsers installed:
- Google Chrome
- Microsoft Internet Explorer
- Mozilla Firefox
- Other browsers

IP addresses
- One static IP address is the management network.
- One additional IP address for an internal Virtual Analyzer with any port of the appliance except the management port.

Deployment Checklist

- User name: admin
- Password: admin

On the Preconfiguration Console main menu, type 2 to select Device Settings and press Enter.

To set a dynamic IP address:
- Use the space bar to toggle the IP address option to dynamic.
- Set a static IP address:
  - A. In the Type field, use the space bar to toggle the IP address option to static.
  - B. Type the following network settings:
    - IP address (IPv4): the default is 192.168.252.1
    - Subnet mask: the default is 255.255.255.0
    - Gateway: the default is 192.168.252.254
    - DNS Server 1
    - DNS Server 2

Note: Deep Discovery Inspector 3.8 and above can be deployed in IPv6 environments.
4. (Optional) Type a VLAN ID.
5. Navigate to Return to main menu and press Enter.

The initial configuration is complete and the management console is accessible.

Performing Initial Configuration: Management Console
1. Using a supported web browser, open the management console at:
   https://<Deep Discovery Inspector IP Address>

Note: Set the Internet Security level to Medium. Enable ActiveX Binary and Script.
Use the IP address that you specified during the initial configuration.
2. On the logon screen, type the following default credentials:
   - User name: admin
   - Password: admin
3. Click Log On.
4. Type a new password, and then retype it to confirm．
5. On Administration > System Settings > Time, set the system time.

Performing Initial Configuration: Preconfiguration Console
1. On the Preconfiguration Console login screen, type the following default login credentials:
   - User name: admin
   - Password: admin
2. On the Preconfiguration Console main menu, type 2 to select Device Settings and press Enter.
4. On the logon screen, type the following default credentials:
   - User name: admin
   - Password: admin
5. Click Log On.
6. Type a new password, and then retype it to confirm.
7. On Administration > System Settings > Time, set the system time.

Performing Initial Configuration: Management Console
1. Using a supported web browser, open the management console at:
   https://<Deep Discovery Inspector IP Address>

Note: Set the Internet Security level to Medium. Enable ActiveX Binary and Script.
2. Use the IP address that you specified during the initial configuration.
3. On the logon screen, type the following default credentials:
   - User name: admin
   - Password: admin
4. Click Log On.
5. Type a new password, and then retype it to confirm.
6. On Administration > System Settings > Time, set the system time.
