TREND MICRO™

SecureCloud™ 2.0

Private Security for the Public and Private Clouds

Managed Service Providers

Quick Reference Guide

Protected Cloud

The user documentation for Trend Micro SecureCloud is intended to introduce the main features of the software and installation instructions for your production environment. You should read through it prior to installing or using the software.

To contact Trend Micro Support, please see Appendix C, *Contact Information and Web-based Resources* in the Administrator's Guide.

Trend Micro is always seeking to improve its documentation. Your feedback is always welcome. Please evaluate this documentation on the following site:

Welcome to the *Trend Micro™ SecureCloud™ Quick Reference Guide* for the 2.0 release of SecureCloud for Managed Service Providers. This guide provides the high-level procedure describing how to perform basic product operations.

Note: Because of the high-level nature of the document, refer to the Administrator's Guide for complete details when instructed.

Summary of Operations

The following are the basic steps necessary to launch the SecureCloud Central Management Console.

Step 1. Install the SecureCloud Database, Application, and Web Servers.

For a typical installation, all three SecureCloud components are installed at the same time and on the same computer. For a custom installation, you install each component on a separate computer by running the Installation Wizard on each individual computer.

See *Installing SecureCloud* in the Administrator's Guide.

Step 2. Setup your on-premise deployment for tenant usage.

Before you can logon and configure the SecureCloud Management Server, the tenant setup procedure needs to be done first in order to establish communication between SecureCloud and the Trend Micro License Management Platform (TMLMP). This procedure can be processed using the Tenant Setup Tool.

See *Setting Up for Tenant Usage and Registering the Product* in the Administrator's Guide.

Step 3. Register your SecureCloud product with Trend Micro.

Product registration is done at log on. As an MSP, you are able to register multiple accounts on behalf of your tenant customers at this time.

See *Setting Up for Tenant Usage and Registering the Product* in the Administrator's Guide.
