

SafeSync^{for Enterprise} Quick Installation Card

1 Preparation

System Requirements

- Processor - 64-bit x86 single core (dual-core recommended)
- Memory - 8GB (32GB recommended)
- System disk space - 60GB available for SafeSync installation
- Network card - Two 1GB NIC
- DVD ROM device

Network Requirements

Prepare a static IP address and IP configuration for SafeSync for Enterprise.
Example: 192.168.100.1 (default)

Create a sub-domain for SafeSync. For example: ssfe.YourCompanyDomain.com

Add four DNS records to the DNS server and map the records to the SafeSync IP address. URL examples for DNS records:

- ssfe.YourCompanyDomain.com
- www.ssfe.YourCompanyDomain.com
- soap.ssfe.YourCompanyDomain.com
- dav.ssfe.YourCompanyDomain.com

Active Directory or LDAP accounts: Contact to your AD/LDAP administrator if you are going to import accounts from AD/LDAP. Refer to the AG for further details.

You can also create SafeSync user accounts manually from the SafeSync management console.

2 Installation

Bare-metal Server

1. Connect to your assigned network ports switch.
2. Insert the installation DVD and boot the server from the DVD.
3. Select **Primary Server** as the server to install.
4. Specify the IP address configuration settings.
5. Wait for installation to complete. This may take up to one hour.

Virtual Machine

VMware ESXi is used in the following procedure as an example.

1. Configure the following settings when creating the virtual machine:

- Configuration: **Typical**
- Name: Specify a meaningful name
- Guest OS: Other, Other (64-bit)
- Network: Create 2 NICs
- Storage: Specify the where the data is stored (60GB minimum)
- CPU: Maximum allowable (64-bit x86)
- RAM: **8GB** or more

2. Insert the installation DVD and boot the server from the DVD.

3. Select Primary Server as the server to install.

4. Specify the IP address configuration settings.

5. Wait for installation to complete. This may take up to one hour.

3 Information for IT Administrators

- Web admin: <https://192.168.100.1/administrator/safesync>
- SafeSync command line console: safesync/safesync
- End users: IT admin configures FQDN on the SafeSync for Enterprise web management console.
