Install your security device

READ ME FIRST. Before using this document, read the TippingPoint Operating System Release Notes for details on any late-breaking changes to the installation and configuration instructions. Product documentation is available from the Documentation section of the TippingPoint TMC. To access the TippingPoint TMC:

1. In a web browser, open https://tmc.tippingpoint.com. Log in with your Passport account or create an account.
2. If this is your first purchase of an TippingPoint product, contact customer support to register your product and obtain your customer ID. See the Read Me First document that is in your product shipment for customer support contact information. Use your customer ID and device certification number to register for a TMC account.

The Quick Start guide provides basic instructions to install and configure the TippingPoint 660N, 1400N, 2500N, 5100N. The TippingPoint N-Platform devices ship with the following interfaces and components:

- 10 1GbE copper ports paired into 5 1GbE segments
- 10 1GbE fiber ports paired into 5 1GbE segments
- 1 1GbE copper management port
- 1 console serial port
- Compact Flash drive
- USB interface for external ZPHA device
- The 2500N/5100N devices also include:
  - 2 10GbE ports paired into 1 10GbE segment
  - a module bay that may be used to install a TippingPoint Smart ZPHA Module

**NOTE:** The fiber ports do not include SFP or XFP modules.

**CAUTION:** The TippingPoint-provided Compact Flash card must be installed before the power cables are connected.

For detailed TippingPoint N-Platform hardware information and installation instructions, consult the TippingPoint N-Platform Hardware Installation and Safety Guide.
The TippingPoint N-Platform Chassis

Refer to the following diagrams when configuring the TippingPoint N-Platform devices.

NOTE: The 660N/1400N do not include the ZPHA module bay or the 10GbE segment ports.

Attach the device to a rack

Load the rack from the bottom to the top with the heaviest component at the bottom. If you plan to add more TippingPoint devices to your network, provide space in the rack for additions. Ensure that the weight is evenly distributed and the rack is stable.

Install the Compact Flash card

The TippingPoint Compact Flash card must be installed before you connect the power. The card is included with the packaging kit. Remove the card from its case and insert it into the Compact Flash slot in the front of the device.

The card is managed via the command line interface (CLI) with the compact-flash and conf t compact-flash commands. Refer to the TippingPoint Command Line Interface Reference Manual 3.x.

Connect the Console Port

The initial configuration for the TippingPoint N-Platform is performed using the command line interface (CLI) on a console directly connected to the device through the console port.

1. Connect the RJ-45 null modem cable to the console port on the unit.
2. Connect the other end of your cable (standard-sized female DB-9 connector) to your VT100-compatible terminal or your computer.

Use the following terminal settings for the Console port:

- Baud rate: 115.2 Kbps
- Character size: 8 bits
- Parity: None
- Stop Bits: One
- Flow Control: None

Connect Segments

The TippingPoint N-Platform devices can aggregate and redirect traffic across 1GbE Copper or fiber segments or, in the case of the 2500N/5100N/6100N, a 10GbE fiber segment.

1. Attach the cable for incoming traffic to the A port on the segment.
2. Attach the cable for outgoing traffic to the B port on the segment.
3. Connect the cables to the appropriate ports on your network router.

NOTE: If you are using a TippingPoint Core Controller to distribute network traffic, attach the cables to the Core Controller 1GbE segment ports. Refer to the Core Controller documentation for more information.

Connect the power

After you connect power to the device according to the appropriate procedure, turn on the power using the switch at the back of the device.

AC Power

1. Locate the male power input on the back of the chassis.
2. Plug one end of a standard female power plug into the power input.
3. Plug the other end into an AC outlet, power strip, or UPS. The power source should meet the following requirements:
   - Voltage: 100-240 VAC
   - Current: 8-5 amps
   - Frequency: 50/60 Hz

Check LEDs

To ensure the system is working correctly, check the following LEDs on the front of the device.

- Copper Ports:
  - Link LED. Green indicates that the port is linked and ready for data.
  - Activity LED. Blinking Amber indicates the port is passing data.
- Fiber Ports:
  - Link LED. Green indicates that the port is linked and ready for data.
  - Activity LED. Amber indicates the port is passing data.
- Management Port:
  - Link LED. Green indicates that the port is linked and ready for data.
  - Activity LED. Blinking Amber indicates the port is passing data.

Complete initial setup configuration

After powering up the device, the TippingPoint Setup wizard displays on the COM port terminal. The wizard prompts you to perform basic device configuration tasks and periodically input information.

1. Following the prompts in the setup wizard:
   a. Create a super user account and password.
   b. Specify a device management IP address. This will be used to manage the device over the network.
   c. Specify a Network Mask, Host Name, and Host Location.
   d. Save your changes.
   e. If you have not done so, use a network cable to connect the management port to the management network.
   f. From an SSH terminal, ping the device management IP address to verify connectivity.
   g. Connect to the device:
      a. From an SSH terminal, connect to the device and login through the CLI with the super username and password.
      b. To login to the device from the Local Security Manager (LSM) application, enter the IP address or hostname of your IPS device in your browser Address bar. For example: https://123.45.67.89.

CAUTION: Failure to replace the terminal block cover exposes you to a risk of severe injury from electric shock.

NOTE: When using the command line interface, configure the terminal emulation package to transmit a Ctrl-H character when the Backspace key is pressed.

NOTE: Do not plug the device directly into the wall. Connect to a SELV power source. The power source should meet the following requirements:

-  Current: -48V
-  Voltage: RTN

Where to go next

After completing the setup, the device will pass traffic using the default filter configuration that automatically recognizes and blocks traffic that is known to be malicious at all times, under all conditions, in all network environments. You can perform additional configuration, administrative, and management tasks using either of the following methods:

- From the LSM, you can perform further configuration, administrative, and management tasks. For details, see the TippingPoint Local Security Manager User’s Guide.
- From the CLI, you can run the setup wizard again using the setup command. This command provides additional configuration options. You can also use other CLI commands to manage the device. For details, see the Command Line Interface Reference.

If you will manage the device using the SMS, refer to the TippingPoint Security Management System User’s Guide for details.
