

TippingPoint™

## Digital Vaccine Deployment Note

October 2017

This information applies to all TippingPoint security devices.

TippingPoint releases an updated Digital Vaccine (DV) every week. The DV is packaged separately for different TippingPoint Operating System (TOS) versions, as shown in the following table.

DV version	Information
3.2.0	The 3.2.0 DV will run on IPS devices with TOS v3.2.0 and above, all NGFW and all TPS systems.
4.0.x	The 4.0.x DV only runs on the TippingPoint Virtual Threat Protection System (vTPS) platform. <b>Note:</b> The vTPS does not currently support pre-disclosed ZDI filters.

We recommend that you download the same DVs for all of your managed devices. For example, if the weekly DV is #DV9005, and the Security Management System (SMS) manages a vTPS and a 440T TPS, after downloading the DVs, the DV Inventory should include the following versions:

- 3.2.0.9005 for the 440T device
- 4.0.0.9005 for the vTPS

If the DV version does not match, click **Download from TMC** and review the list of available DVs.
