

Security Management System (SMS) Release Notes

Version 5.3.0.1

This release includes all issues fixed in *Security Management System Release Notes Version 5.3.0*. For details about those changes, refer to the v5.3.0 Release Notes on the [Online Help Center](#).

Important notes for SMS

- All SMS v5.3.0 customers can optionally apply this patch so that the issues it addresses are corrected. However, upgrades to a later TOS do not require an installation of this patch first.
- Patch installation should take approximately 15 minutes.
- To prevent your account from being disabled while you wait for authentication resources to become available after the reboot, navigate to **Edit > Preferences** and make sure that you deselect **Lock user after failed login attempts** and **Auto reconnect client to server after a disconnect occurs**. The SMS automatically reboots after you install this release. You will then be prompted to update the SMS client.
- This patch can be uninstalled or rolled back to the previous version.

Release contents

The following items have been repaired in this release.

Description	Reference
<p>A URL reputation issue was discovered that caused existing user entries with either domain wildcards or path wildcards to be altered. The issue occurred when upgrading from a previous version of SMS to version v5.3.0.</p> <p>After you upgrade the SMS to this v5.3.0.1 patch and it reboots, you are notified that URLs with corrupted domain wildcards have been repaired. An entry is added to the system log. Navigate to the .csv report in Admin > Exports and Archives to see each corrected URL.</p> <p>Use the SMS CLI to optionally update URL entries ending in /* so that they end in a wildcard:</p> <pre>set url.path-wildcard-fix=yes</pre> <p>Another .csv report in Admin > Exports and Archives identifies each corrected URL and the system log is updated.</p>	TIP-48354
The SMS entered a perpetual loop after rolling back a nested profile.	TIP-46507
The SMS remote syslog included outdated device logs with current ones.	TIP-45360

Known issues

Description	Reference
When run from the SMS client, the WHOIS command sometimes yields no results.	TIP-52081
