

Security Management System (SMS) Release Notes

Version 5.3.0.3

This release includes all issues fixed in versions 5.3.0, 5.3.0.1, and 5.3.0.2 of the *Security Management System Release Notes*. For details about those changes, refer to the respective Release Notes on the [Online Help Center](#).

Important notes for SMS

- All SMS v5.3.0 customers can optionally apply this patch so that the issues it addresses are corrected. However, upgrades to a later TOS do not require an installation of this patch first.
- Patch installation should take approximately 15 minutes.
- To prevent your account from being disabled while you wait for authentication resources to become available after the reboot, navigate to **Edit > Preferences** and make sure that you deselect **Lock user after failed login attempts** and **Auto reconnect client to server after a disconnect occurs**. The SMS automatically reboots after you install this release. You will then be prompted to update the SMS client.
- This patch can be uninstalled or rolled back to the previous version.

Release contents

The following items have been repaired in this release.

Description	Reference
When you navigate to Admin > General > SMS Software to upgrade the SMS software version to upgrade your v5.3.x TOS, available upgrade options now display correctly.	TIP-58790
Outdated logs no longer get sent to the Syslog collector.	TIP-59357
A new API call to the SMS returns a CSV file with all user-defined reputation entries.	TIP-52354
SMS HA synchronization no longer fails when you deselect Include historical event data during HA cluster configuration.	TIP-60692
The SMS Client no longer displays a blank pane instead of the remote syslog.	TIP-59281
An issue that caused re-enablement of auto-negotiation to fail has been repaired.	TIP-56607
Configuring an SSL inspection policy no longer causes a profile distribution to fail.	TIP-57436

Reputation entries from DDI services no longer cause problems in the Distribution Queue.	TIP-53407
The iptables rule for ssh port 22 now correctly closes when ssh is disabled.	TIP-59975
This release fixes an issue that prevented the SMS from sending syslog events to ArcSight.	TIP-59231

Known issues

Description	Reference
After you increase the vSMS disk size, you must turn on and then reboot the vSMS again before the extra disk space is achieved. If you originally deployed the vSMS using TOS v5.2.0 or earlier, the increased disk space cannot be fully achieved.	TIP-54547 TIP-54548
