

# Security Management System Release Notes

Version 5.4.1.1

## Important notes

- To ensure that you have the latest versions of product documentation, visit the [Online Help Center](#).
- If your SMS system is operating in High Availability (HA) mode, you must break HA and upgrade each SMS independently before re-establishing your SMS HA cluster.
- SMS v5.4.1 and later upgrades are only supported from an SMS installed with SMS v5.3.0 or later. Attempts to upgrade from an older release will result in an error message.

## Release contents

Description	Reference
This release corrects an issue that prevented the SMS from sending syslog events to ArcSight.	TIP-59231
The SMS Client no longer displays a blank pane instead of the remote syslog.	TIP-59281
Outdated logs no longer get sent to the syslog collector.	TIP-59357
The iptables rule for ssh port 22 now correctly closes when ssh is disabled.	TIP-59975
SMS HA synchronization no longer fails when you deselect <b>Include historical event data</b> during HA cluster configuration.	TIP-60692
An issue causing extremely lengthy profile distributions to a large number of devices in a flat hierarchy has been corrected in this release.	TIP-59427
This release corrects an issue that prevented the SMS from sending syslog events that included URI (uriString) or user (srcUserName/dstUserName) fields.	TIP-62553
This release corrects an issue that prevented logins to SMS when using Active Client 7.2.2 with CAC authentication.	TIP-61820
The & character is now allowed in filter names.	TIP-49259

## Known issues

Description	Reference
Attempts to upgrade from a release earlier than v5.3.0 result in an error message. If the error message is blank, check the SMS system log for the entire error message.	TIP-47930
Performing a backup and restore of the SMS database will not preserve Filter Performance Correlation data.	TIP-42709
After you increase the vSMS disk size, you must turn on and then reboot the vSMS again before the extra disk space is achieved. If you originally deployed the vSMS using TOS v5.2.0 or earlier, the increased disk space cannot be fully achieved.	TIP-54547 TIP-54548
<p>The <b>Edit Bulk</b> action does not remove tag categories from user-provided Reputation entries. To remove tag categories from an entry, go to <b>Profiles &gt; Reputation Database &gt; Search Entries</b>, search for an entry, select entries in the search results, and click <b>Edit</b>.</p> <p>The search results display the first 10,000 entries. If you are modifying more than 10,000 entries, you must repeat this procedure. When searching for URL entries, the search results table will not automatically refresh. Click <b>Search</b> to refresh the table.</p>	TIP-37913
<p>When used in an SSL policy name, some special characters can trigger a condition that causes profile distributions to fail. When naming your SSL policy, use only these characters:</p> <ul style="list-style-type: none"> <li>Alphanumeric characters: <b>a</b> through <b>z</b>, <b>A</b> through <b>Z</b>, and <b>0</b> through <b>9</b></li> <li>Special characters: <b>( )</b></li> </ul>	TIP-38808
<p>The SMS web management console shows the incorrect time zone only when set to GMT +/- 00:30 time zones.</p> <p>For the correct time, refer to the SMS Client console.</p>	TIP-33377
The SMS does not activate a Digital Vaccine package when it contains a significant number of malware tags for a filter.	TIP-33378
When you attempt to distribute too many TLS/SSL certificates to a device, the resulting error message incorrectly specifies CA certificates as the problem.	TIP-44753
When you remove a CA certificate used for authentication from the SMS Authentication CA certificate list—for example, when you delete the authentication configuration from the SMS—the CA certificate is also deleted from the device. If this same CA certificate was distributed to a device as part of the SSL server certificate chain, the device would have an SSL server with a missing CA certificate in its SSL certificate chain.	TIP-44645
Exporting the hourly report to the SMB share does not work on systems upgraded to SMS 5.3.0.1.	SEG-77932
