## Release contents

Description	Reference
Log file management was modified to prevent disk space utilization warnings for the OS file system.	TIP-67745 SEG-112054
This release repairs various issues that caused profile distributions to fail.	TIP-74301 SEG-132096 SEG-122201 SEG-114271
A discrepancy of filter information between the REST API and the Client has been repaired.	SEG-107004
All reputation and geolocation filter changes are now properly logged.	TIP-64542 SEG-106827
This release resolves an issue where devices would not display the selected decrypted service for SSL server setup in SMS.	SEG-73462
To avoid parsing errors in the remote syslog server, trim extra spaces in the message field of the device's audit and system logs.	TIP-49739 SEG-126268

## Known issues

Description	Reference
Performing a backup and restore of the SMS database will not preserve Filter Performance Correlation data.	TIP-42709
After you increase the vSMS disk size, you must turn on and then reboot the vSMS again before the extra disk space is achieved. If you originally deployed the vSMS using TOS v5.2.0 or earlier, the increased disk space cannot be fully achieved.	TIP-54547 TIP-54548
<p>The <b>Edit Bulk</b> action does not remove tag categories from user-provided Reputation entries. To remove tag categories from an entry, go to <b>Profiles &gt; Reputation Database &gt; Search Entries</b>, search for an entry, select entries in the search results, and click <b>Edit</b>.</p> <p>The search results display the first 10,000 entries. If you are modifying more than 10,000 entries, you must repeat this procedure. When searching for URL entries, the search results table will not automatically refresh. Click <b>Search</b> to refresh the table.</p>	TIP-37913
<p>When used in an SSL policy name, some special characters can trigger a condition that causes profile distributions to fail. When naming your SSL policy, use only these characters:</p> <ul style="list-style-type: none"> <li>• Alphanumeric characters: <b>a</b> through <b>z</b>, <b>A</b> through <b>Z</b>, and <b>0</b> through <b>9</b></li> <li>• Special characters: <b>( )</b></li> </ul>	TIP-38808
<p>The SMS web management console shows the incorrect time zone only when set to GMT +/- 00:30 time zones.</p> <p>For the correct time, refer to the SMS Client console.</p>	TIP-33377
The SMS does not activate a Digital Vaccine package when it contains a significant number of malware tags for a filter.	TIP-33378
When you attempt to distribute too many TLS/SSL certificates to a device, the resulting error message incorrectly specifies CA certificates as the problem.	TIP-44753
When you remove a CA certificate used for authentication from the SMS Authentication CA certificate list—for example, when you delete the authentication configuration from the SMS—the CA certificate is also deleted from the device. If this same CA certificate was distributed to a device as part of the SSL server certificate chain, the device would have an SSL server with a missing CA certificate in its SSL certificate chain.	TIP-44645
Exporting the hourly report to the SMB share does not work on systems upgraded to SMS 5.3.0.1.	SEG-77932
