

## Security Management System (SMS) Release Notes

Version 5.5.0.1

This release includes all issues fixed in the *Security Management System Release Notes Version 5.5.0*. For details about those changes, refer to the respective Release Notes on the [Online Help Center](#).

### Important notes for SMS

- All SMS v5.5.0 customers can optionally apply this patch so that the issues it addresses are corrected. However, upgrades to a later TOS do not require an installation of this patch first.
- Patch installation should take approximately 15 minutes.
- To prevent your account from being disabled while you wait for authentication resources to become available after the reboot, navigate to **Edit > Preferences** and make sure that you deselect **Lock user after failed login attempts** and **Auto reconnect client to server after a disconnect occurs**. The SMS automatically reboots after you install this release. You will then be prompted to update the SMS client.
- This patch can be uninstalled or rolled back to the previous version.

### Release contents

The following items have been repaired in this release.

Description	Reference
You can now enable the SMS to share detection events with Trend Micro Vision One through Service Gateway (version 1.0.0.10051 or later). This capability allows for more insight into network events in your environment so that you can better understand whether suspicious activity or incidents are occurring. <a href="#">Learn more</a> .	TIP-67904
When you use the SMS to configure SSL client or server inspection, adding ports to one of the decryption services (such as HTTP, IMAP, and POP3) sometimes resulted in the decryption service incorrectly being set to "other". This issue has been repaired.	TIP-69425
An issue that prevented the SMS from connecting to the SMB and resulted in backups failing has been repaired.	TIP-52354
